

Grok

X AI

REAL-TIME

“Wired straight into X for real-time signal — built for speed, edge, and questions that need to know what's happening right now.”

BEST FOR

- Real-time information pulled from X (Twitter) and the live web
- Fast, less-filtered answers than most consumer assistants
- Long-running agentic tasks (Grok 4.6's focus area)
- Multi-agent reasoning on hard problems (Grok 4 Heavy)
- Image understanding alongside text

NOT BEST FOR

- ✗ Smaller context window (500K) than Gemini, DeepSeek, or Qwen's 1M
- ✗ Top tiers (\$100-\$300/mo) are expensive relative to competitors
- ✗ Less enterprise compliance tooling than Claude or ChatGPT

GETTING STARTED

- Go to [grok.com](#) or open Grok inside the X app.
- The free tier is included with any X account — test a real task first.
- Upgrade to SuperGrok (\$30/mo) for full Grok 4 access.
- Step up to Heavy (\$300/mo) only if you need multi-agent parallel reasoning.

PRICING

PLAN	PRICE	NOTES
Free	\$0/mo	Limited access, X account required
X Premium	\$8/mo	Grok bundled with an X subscription
SuperGrok	\$30/mo	Full Grok 4 access, 128K context
Plus	\$100/mo	Higher limits, priority access
Heavy	\$300/mo	Grok 4 Heavy multi-agent reasoning, 256K context

KEY FEATURES

- Grok 4.6 (Aug 2026): 500K-token context, long-running agents, image + text input
- Grok 4 Heavy: multi-agent reasoning with parallel test-time compute, top benchmark tier
- Native, real-time access to X posts and trends — no separate search toggle
- Function calling and structured outputs for building on the API
- Voice and video modes for hands-free or visual tasks

PROMPT TEMPLATES

“What is everyone on X saying about [topic] in the last 24 hours?”

“Give me the unfiltered take on this business decision: [paste decision]”

“Analyze this image and tell me what's actually going on: [attach image]”

“Run this as a long agent task: monitor [topic] and summarize it daily.”

QUICK REFERENCE

Start fresh	New chat on grok.com or in the X app
Get real-time info	Just ask — X data is native, no toggle needed
Analyze an image	Attach it directly
Run a long task	Use an agent task, not a single chat turn
Need deepest reasoning	Use the Heavy tier for multi-agent mode

PRO TIPS

- Grok's edge is live X data — lean on it for anything time-sensitive a static model would miss.
- Don't pay for Heavy unless you actually have multi-step problems that benefit from parallel agents.
- Cross-check anything opinion-flavored — Grok is intentionally less filtered than most competitors.
- For coding or business tasks without a real-time angle, SuperGrok is usually enough.
